

HOW TO KEEP OTHERS SAFE AT HOME

You are most likely to catch coronavirus from someone you live with as it spreads easily within small, indoor spaces. Here are a few simple things you can do to reduce the risk for others in your home:

Keep shared spaces like the bathroom and kitchen clean using normal household products

Regularly clean things people touch the most such as taps, worktops, tables, door handles, light switches and handrails

Don't share towels, including hand towels and tea towels

Wash your hands regularly with soap and water

Cover coughs and sneezes and bin tissues quickly

Air the house and open windows when you can; coronavirus doesn't spread as quickly in well-ventilated spaces

Limit close contact with others at home as much as possible
